## PROOF OF POTABLE WATER SCHEDULE L

The British Columbia *Building Code* states “every *dwelling unit* shall be supplied with *potable water*”. The plumbing Code defines potable as “safe for human consumption”. The Ministry of Health has adopted the Canadian Drinking Water Guidelines and amendments thereto, as the standard, which must be met when water is tested to determine potability for domestic purposes. The Safe Drinking Water Regulation, a regulation under the Health Act, sets out parameters for water potability requirements and disinfection requirements of surface water. It is a condition of the *building permit* and an *occupancy permit* that the *owner* supply proof of *potable water* in accordance with this bylaw.

Water must be both sampled and tested by an accredited laboratory approved under the Safe Drinking Water Regulation. The laboratory must provide proof of accreditation, as well as the sample results and written confirmation that the water was both sampled and tested by the laboratory.

The minimum specific health-related parameters for which water supplies must be tested are:

PARAMETER	MAXIMUM CONCENTRATION
Arsenic	0.010 mg/L
Barium	1.0 mg/L
Boron	5.0 mg/L
Chromium	0.05 mg/L
Fluoride, dissolved	1.5 mg/L
Lead	0.01 mg/L
Nitrogen : Nitrate	10.0 mg/L
Nitrogen : Nitrite	1.0 mg/L
Coliform, E. Coli	<1 per 100 ml
Coliform, Total	<1 per 100 ml

(Amended as per Bylaw 437, 2011)

The above list is considered a minimum, owner’s may choose to satisfy additional test parameters.+

**Water tests must not be dated more than 180 days before the date of issuance of a *Building Permit* or *Occupancy Permit*.**
